Adding a Kaltura Video to an Announcement

Instructors can energize their announcements to their students by including Kaltura video content. Instructors will be able to choose a video or videos from their My Media or record videos and embed them directly in Canvas.

From the course "Announcements" tab, click on the "Create New Announcement" button in the upper-right corner of the screen.

In the rich text editor, click on the "More External Tools" icon.

Select "Embed Kaltura Media" from the dropdown menu.
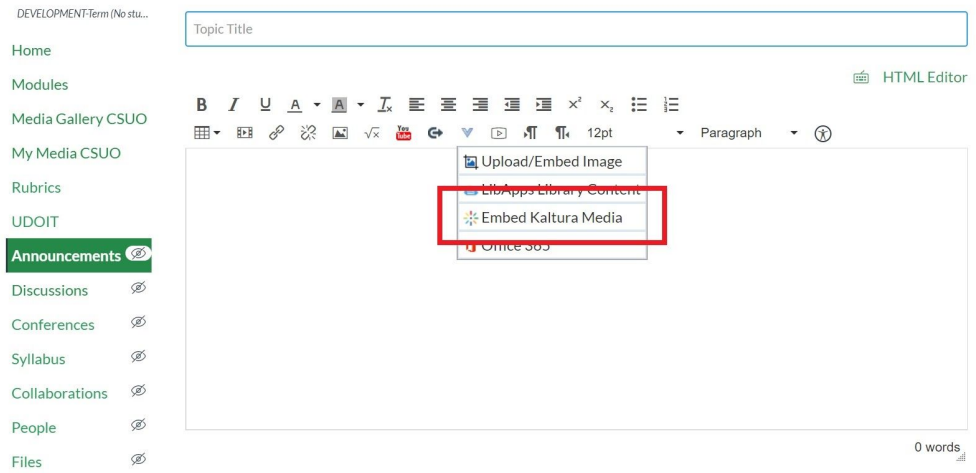

If you need to create a new video recording, click "Add New" then select the "Kaltura Capture" option from the dropdown menu. (See "Recording your Video in Kaltura".)
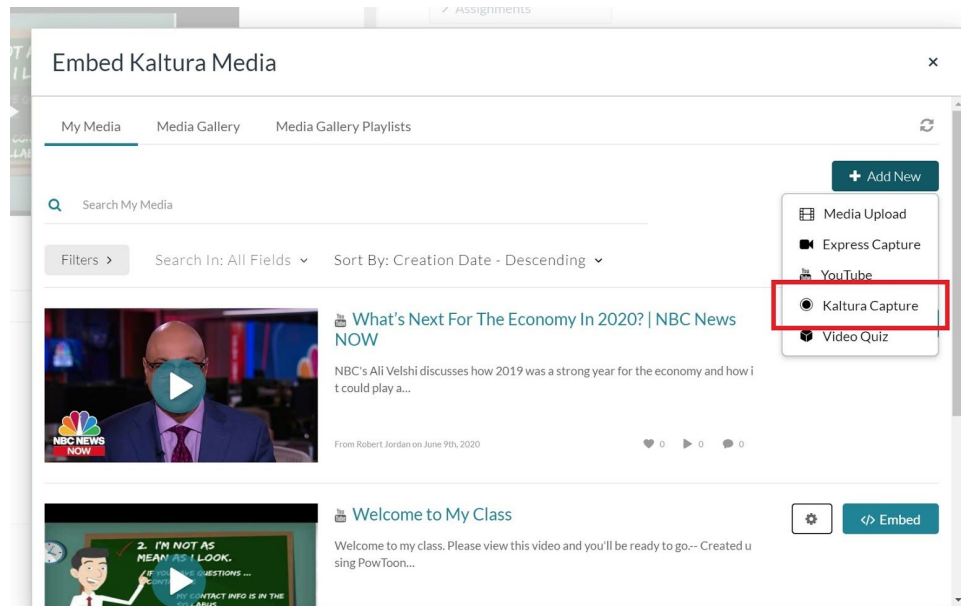

If you already have a video in your My Media folder, select the Kaltura video you want to use and click the "</> Embed" button.
